

Halal Basket

Stakeholder System Workflow

How the system works today · Pilot-ready overview · Glossary included
Based on the live apps and features built so far

1. What Halal Basket is

Halal Basket is a grocery ordering and delivery platform. Customers shop one branded catalogue. Partner shops prepare the goods. Drivers deliver. Operations staff support orders, catalogue, and customer care — including WhatsApp when enabled.

2. Who uses the system

Figure: Who uses Halal Basket

Who	App	Main job
Customer	Customer App	Browse, order, pay, track
Shop staff	Shop Portal	Prepare orders, stock, assign driver
Driver	Driver App	Deliver assigned orders
Ops / Admin	Admin Console	Support, catalogue, settings, WhatsApp
Platform owner	Admin (elevated)	Roles, legal, branding, languages

3. How an order flows (happy path)

Halal Basket — How an order flows

Figure: End-to-end order flow

- Customer browses the catalogue for their delivery area and builds a basket.
- Customer checks out for scheduled delivery and places the order (stock is held briefly).
- Customer pays on the confirmation screen.
- Shop prepares the fulfillment and assigns a driver.
- Driver delivers and updates status.
- Admin can look up the order, help with issues, refunds, or WhatsApp care if needed.

4. Who does what on one order

Figure: Role responsibilities across one order

Think of one order as a relay: Customer starts it, Shop prepares it, Driver finishes delivery, Admin only steps in when support or configuration is needed.

5. Role workflows (step by step)

Customer

- Register or sign in on the Customer App.
- Choose a delivery area and browse the catalogue.
- Add items to the basket (favourites optional).
- Checkout: confirm basket → delivery details → place order.
- Pay on the confirmation screen.
- Track the order under My orders; manage profile, addresses, and favourites.

Shop (partner)

- Open the Shop Portal and review new fulfillments.
- Update status: preparing → ready → out for delivery.
- Assign a driver when ready for delivery.
- Maintain product price and stock quantity.
- Use the prep view to plan by delivery date.

Driver

- Open the Driver App and review today's assigned jobs.
- Open an order, complete the delivery steps, and mark progress.
- Submit feedback / ratings where prompted.
- Review history of completed work.

Admin / Operations

- Look up orders, totals, coupons, and fees.
- Handle refunds, complaints, and customer risk/block actions when needed.
- Manage shops, drivers, staff users, and permissions.
- Maintain catalogue, featured categories, delivery fees, promotions, branding.
- Publish legal pages; use GDPR tools when required.
- Monitor WhatsApp care inbox and catalogue sync (when WhatsApp is enabled).

WhatsApp (optional channel)

- Customer can opt in at checkout for order notifications.
- Keywords and inbox support help (status, pay link, order help).
- Support can send assist or shop links from the admin inbox.
- Customers can shop the WhatsApp catalogue; cart can create a Halal Basket order plus pay link.

6. Simple end-to-end picture

Register → Catalogue (choose area) → Basket → Checkout (scheduled delivery) → Place order → Pay → Shop prepares & assigns driver → Driver delivers → Ops available for support

Optional side path: customer opts into WhatsApp for updates; or shops via WhatsApp catalogue, which can create the same unpaid order plus a pay link.

7. What is live for pilot vs not yet

Live / ready to demonstrate

- Customer browse → scheduled delivery order → pay → shop prepare → driver deliver → ops support
- Four portals: Customer, Shop, Driver, Admin
- Delivery areas & calendar (e.g. Lucan, Swords, Tallaght)
- Coupons / promotions, favourites, multi-language string packs (when languages are published)
- WhatsApp care + catalogue commerce in Meta sandbox / test setup

Not yet for stakeholders to treat as production-live

- Production / public staging website cutover (still local pilot-ready)
- Pickup and realtime delivery in the customer checkout screen (API exists; UI is scheduled-only today)
- Warehouse-led fulfillment published to customers
- Multi-shop split orders in production (feature exists, default off)
- WhatsApp on a live production business number (sandbox/test today)

Part 2 — Glossary of terms

Every important term used in this document is defined below.

Term	Meaning in Halal Basket
Halal Basket	The platform brand customers see. One catalogue experience, not separate shop storefronts.
Customer App	Where shoppers browse, add items, check out, pay, and track orders.
Shop Portal	Where a partner shop prepares orders, updates stock/prices, and assigns drivers.
Driver App	Where drivers see assigned deliveries and mark progress through to delivered.
Admin Console	Where operations and platform teams manage orders, users, catalogue, fees, legal, and WhatsApp.
Catalogue	The shared product listing customers browse. Availability depends on the selected delivery area.
Basket / Cart	The list of items the customer intends to buy, before the order is placed.
Delivery area	A named place we deliver to (for example Lucan, Swords, Tallaght). Affects stock and delivery day.
Delivery calendar	Rules that map each delivery area to the weekday(s) when deliveries run.
Scheduled delivery	The live checkout option today: customer orders ahead for a planned delivery day.
Order	The customer's purchase record (items, totals, payment, delivery details).
Fulfillment	The shop's part of an order — prepare, ready, out for delivery, delivered.
Stock hold	A short reservation of stock while checkout completes, so items are not double-sold.
Payment	Customer pays after placing the order (mock pay in pilot, or Stripe Checkout when configured).
Coupon / Promo	Discount codes or cart promotions applied at checkout (for example HALAL10, WELCOME5).
Partner shop	A store that stocks and prepares items for Halal Basket orders.
Warehouse	A central stock location type in the system; not published for customer fulfillment in the current pilot.
WhatsApp channel	Optional messaging path: order updates, customer care inbox, and catalogue cart → Halal Basket order.
Care inbox	Admin view of WhatsApp conversations so support can reply and help customers.
Assist link	A secure short-lived link that helps a customer continue checkout with support guidance.
Opt-in	Customer agrees to receive WhatsApp order updates and share a phone number.

RBAC / Permissions	Staff access controls — who can see ops, catalogue, GDPR, WhatsApp, and so on.
Platform vs Work	Admin navigation: Platform = settings/governance; Work = day-to-day operations.
GDPR tools	Admin privacy tools to search, export, or erase customer data under policy constraints.
Legal documents	Published policies (privacy, terms, cookies, refunds) shown to customers.
Favourites	Products a signed-in customer has hearted for quick re-find.
Live order status	Customer order tracking updates while the order moves through shop and driver steps.

Meeting tip

For a live walkthrough, open the visual companion HTML in a browser and share your screen. Use this PDF/Word file as the leave-behind handout.
